

COMPANY NEWS

Bosch Packaging Technology India

The Bosch division Packaging Technology, based in Waiblingen (Germany), is one of the leading suppliers in the field of processing and packaging technology. Innovation is the company's key to success and this is reflected well in the tailor made solutions that they offer to the packaging industry. The product portfolio ranges from filling, process and packaging technology, for pharmaceutical products and confectionery, to packaging solutions for piece goods and bulk items in the food sector, as well as for health and hygiene products. Reference projects can be found among bar, biscuit and chewing gum manufacturers.

The pharmaceutical product range is a worldwide leader in sterile filling and packaging processes, as well as in isolator technology. The range of services includes not only single modules, but also complete service packages, customized systems and all-in-one solutions, based on a holistic consulting process and project engineering know-how.

The operations of Bosch Packaging Technology India started in 1995. In 2007 Bosch Packaging Technology India shifted its operations from Bangalore to Goa. Today the Goa facility employs 114 associates and has capacity of 150 machines a year with plans to increase this to 300 machines in three years. Till date Bosch Packaging Technology India has already sold over 1100 packaging machines in India and abroad to leading names in the pharmaceutical, confectionery and food processing industries.

At present the operation in India designs; manufactures and markets form, fill and seal machines for flexible pouch packing, flow wrap machines for pillow packed candy applications and liquid pharmaceuticals products. The subsidiary in India brings the global expertise to manufacture form, fill and seal machines as well as flow wrap machines for the Indian market. To cater to the industry's specific requirements in India for the food industry, the company introduced a high speed intermittent motion vertical form, fill and seal (VFFS) bagger to the market.

Bosch Packaging Technology India is ISO 9001:2000 certified. The company does not only provide far more than well-proven machines, but also delivers complete concepts that satisfy all requirements placed on modern technology - from ergonomic design right up to user friendliness. The modularly structured machine concepts of Bosch allow it to react quickly and flexibly to satisfy customer's individual requirements. In addition Bosch offers support in partnership by a comprehensive provision of services that is regarded superior to industry offerings. has envisaged exploring the domestic markets which it intends to conquer with a new product line in terms of fruit & vegetable purees and pulps. Tricom Fruits is also focusing on enhancing efficiency of existing processing lines by adopting energy efficient designs and better process controls.

Tricom Fruit Products Limited (Tricom Fruits) is engaged in processing of wide range of fruits namely mangoes, pomegranates, guavas, papayas, tomatoes, bananas, gooseberries (Amla) in the form of puree, puree concentrate and frozen clear juice concentrate. Tricom Fruits processes fruits in its state-of-the-art facility which is located in India's most fertile fruit producing region about 70kms from Pune and spread over 40 acres area. Tricom Fruits adheres to globally certified quality practices and has adopted international grade packaging standards.

Mr. Chetan Kothari, Chairman, Tricom Fruit Products Limited said, "We are very proud of the fact that our Andori plant, which is the third largest plant in the country, has commenced its second year of operations. We shall shortly double the processing capacity from current 10 tonnes per hour to 20 tonnes per hour for mango and pomegranate and from 5 tonnes per hour to 10 tonnes per hour for guava, papaya, tomato and gooseberry (amla). With such ambitious plans in store, we hope to see an equally prosperous 2012".

BERICAP

GALILEO® is the registered name for a range of closures from BERICAP (www.bericap.com) that all use its patented technology for moulded hinge closures. BERICAP is particularly committed to development and innovation in plastic closures for its customers. The proven GALILEO® technology was the base for a new long skirt dispensing closure development, the LSK EV 29/44, fitting to a Verplast 29/21 neck finish.

This new design allows keeping the original and traditional look for products, dedicated to premium edible oil, vinegar and traditional syrups markets, but also allowing a modern communication to

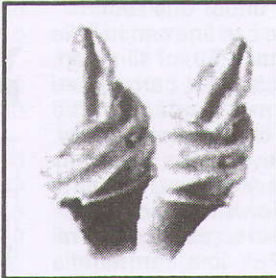

100 % Veg.
